

Riley Gramlich

FULL-STACK DEVELOPER

rileygramlich@gmail.com · Calgary, AB · rileygramlich.dev · github.com/rileygramlich

SUMMARY

Full-stack developer with production experience owning live client sites end to end — build, hosting, performance, and DNS — alongside hands-on work building agent systems on LLM APIs. Pursuing a BSc in Computer Science while shipping and supporting real systems for paying clients.

SKILLS

Languages: JavaScript, TypeScript, Python, C#, C++, SQL, HTML, CSS

Frameworks & Libraries: React, Angular, Node.js, Express, Django, Flask, ASP.NET, WordPress / Elementor Pro

AI & Agentic Development: Claude Code (agentic coding workflows, subagents, skills, hooks, automation); Claude / Anthropic API integration (tool use, streaming, prompt caching); Model Context Protocol (MCP) servers

Data & Infrastructure: PostgreSQL, MongoDB, RESTful APIs, AWS, Google Cloud, Cloudflare / DNS, Linux servers, Git & GitHub, Agile development

Machine Learning: TensorFlow, PyTorch, deep learning fundamentals

EXPERIENCE

Senior Web Developer (Contract), UrbanTec Property Management — Calgary, AB Apr 2025 – Present

- Sole developer on urbantec.ca, a WordPress/Elementor Pro site for a Calgary condominium management firm — own the build, hosting, performance, and DNS end to end.
- Migrated the domain to Cloudflare, preserving SPF/DKIM and third-party mail senders through the cutover and moving TLS to Full (strict).
- Traced a site-wide caching failure to an Elementor split-test cookie set on every response, which blocked LiteSpeed from storing pages so first-time visitors never hit cache, and rebuilt the cache rules around it.

Web Developer, Prairie College — Three Hills, AB Nov 2023 – Present

- Build and maintain pages across the college website in WordPress, keeping performance and user experience consistent site-wide.
- Use Elementor Pro to produce interactive, on-brand pages that meet accessibility standards.
- Collaborate with designers and content stakeholders to plan and implement site strategy.

PROJECTS

GSS Assist — AI receptionist for phone and text Node · Claude API · Twilio
reception.rileygramlich.dev

- Voice and SMS/WhatsApp agent that answers on the first ring, books into Google Calendar mid-call, takes messages, and transfers to a human when it should.
- Built on the Claude API with tool use driving every action; Twilio ConversationRelay streams live speech over WebSockets into the agent loop.
- Node.js/Express, deployed with Docker and Caddy; each client configured from a single JSON file, with a rate-limited public demo running the real agent against a sandboxed calendar.

Scribist — full-stack writing app MERN
github.com/rileygramlich/scribist

- Full document creation and editing with live multi-user collaboration over WebSockets.
- Berserk Mode: a timed writing mode that pushes users toward a target word count.

Glossa Galore — language-learning app MEN
github.com/rileygramlich/glossa-galore

- Flashcard-driven vocabulary builder built as a branded social network with user accounts and shared decks.

EDUCATION

BSc, Computer Science — Mount Royal University, Calgary (in progress) Sep 2024 – Apr 2028

- Coursework in algorithms, data structures, software development, and systems design.

Software Engineering Immersive — General Assembly, Toronto Oct 2022 – Jan 2023

- Intensive full-stack bootcamp: MERN stack, Python/Django/SQL, Git, and command-line workflows.
